# Wait, We've Gotta Ask That Too? - Navigating Preventive Screening in Integrated Care

Center of Excellence for Integrated Health Solutions Funded by Substance Abuse and Mental Health Services Administration Operated by the National Council for Behavioral Health

#### **Today's Moderator**

Kristin Potterbusch, MPH Senior Program Manager Primary Care Development Corporation New York, NY

# **About PCDC**

Primary Care Development Corporation (PCDC) is a national nonprofit organization and a community development financial institution catalyzing excellence in primary care through strategic community investment, capacity building, and policy initiatives to achieve health equity.

## **Integration at Work**

This year we will be covering critical concepts to support your practice of integrated care such as:

- Integration models
- Quality improvement
- Funding and relationship development
- Behavioral health screenings for primary care
- Primary care considerations for behavioral health

# **Audience Demographics Poll**

#### Do you work in a:

- Primary care setting
- Behavioral health setting
- Integrated care setting

#### Are you working primarily as a:

- MD/DO
- Nurse Practitioner/Registered Nurse
- Physician Assistant
- Medical Assistant
- Therapist
- Social Worker
- Care Manager
- QI Manager
- Informatics
- Other

Please rate your current skills and comfort with selecting and utilizing screening tools and approaches to adopting screening protocols.

- 1. Very Low
- 2. Low
- 3. Moderate
- 4. High
- 5. Very High

# **Tip Sheet**

PRIMARY CARE DEVELOPMENT CORPORATION

#### QUALITY IMPROVEMENT TIPS FOR INTEGRATED CARE SETTINGS

	Types of Integration	, in the second s		QI CONS
Coordinated Care (off-site)	Co-located Care (on-site)	Highly Integrated Care		Physical and behavior
Level 1: Minimal Collaboration	Level 3: Basic Collaboration	Level 5: Close Collaboration		<ul> <li>Physical and behavioral on chronic disease ma</li> </ul>
Patients are referred to a provider at another practice site, and providers have minimal communication Level 2: Basic Collaboration	Providers share the same facility, but maintain separate cultures and develop separate treatment plans for patients	Providers develop and implement collaborative treatment planning for shared patients but not for other patients Level 6: Full Collaboration	•	conditions. Physical and behaviora to shared outcomes an
Providers at separate sites periodically communicate about shared patients	Level 4: Close Collaboration Providers share records and some system integration	Providers develop and implement collaborative treatment planning for all patients		<ul> <li>Clinicians are familiar</li> <li>interventions and scree</li> <li>Population health data</li> <li>determine what service</li> </ul>

#### INTEGRATION CONTINUUM Key Domains of Integrated Care Preliminary iate I -Advanced -Systematic screening for universal Analysis of patient population to Screening and f/u for Response to patient self-report of general health risk factors & stratify by severity of medical preventive and general health complaints and/or roactive health education to complexity and/or high-cost general medical Screening hronic liness t/u when prompted support motivation to address utilization for proactive Referral conditions (GMC) risk factors. assessment tracking. to Care Follow-Up Formal collaborative acreement Enhanced referral facilitation to (f/u) Facilitation of with external PC clinic to facilitat Referral to external primary care onsite or closely integrated off-site referrals and f/u referral that includes engagemen clinical(s) and no/limited flu. PCPs with automated data sharing and communication expectations and accountability for engagemen Use of tracking tool to monitor Longitudinal clinical Some ability to perform thu of Ongoing Care None or minimal f/u of patients tment response and outcome monitoring & general health appointments, referral to primary & medical encourage medical adherence, over time at individual and group level, coaching and proactive flu engagement for specialty care. Management preventive health and navigation of appointments and GMC

#### SIDERATIONS FOR INTEGRATED SETTINGS CHECKLIST Key staff are prepared to successfully support integrated care. oral health staff collaborate nanagement AND common ral health staff all contribute and measures.

- r with effective, brief reenings.
- ata is reviewed regularly to vices are necessary.

Physical space designed in a way that facilitates integration.

#### Presenters

Deborah Johnson Ingram, MPH Senior Director

Maia Bhirud Morse, MPH, CPC Senior Program Manager

# **Today's Key Objectives**

#### Screenings, screenings, and more screenings

- Selecting Tools for Preventive Care
- Identifying and Operationalizing Sustainable Processes
- Staff Training and Documentation
- Case Studies

### **Recommended Screenings for Adults**

https://www.aafp.org/dam/AAFP/documents/journals/afp/USPSTFHealthCareSchedule2019.pdf

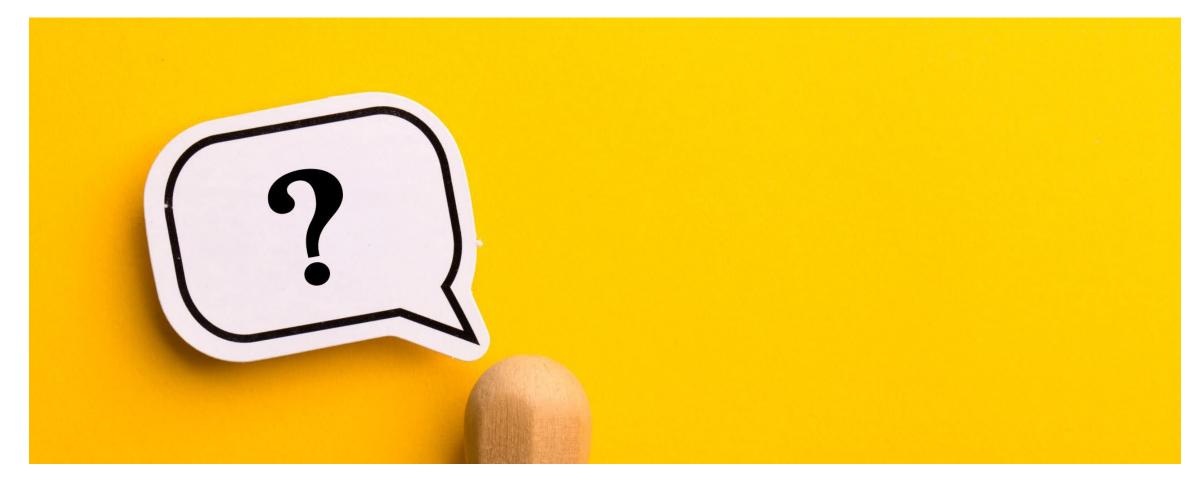

- The U.S. Preventive Services Task Force (USPSTF) is an independent voluntary panel of experts in primary care, prevention, and evidence-based practice. As of April 2016, the USPSTF has recommendation statements for more than 80 active topics, most of which are endorsed by the American Academy of Family Physicians.<sup>1</sup> Its process has been recognized by the Institute of Medicine as a model for development of evidence-based practice guidelines.<sup>2</sup>
- However, numerous barriers exist to implementing these guidelines, including knowledge, time, insurance, and social barriers.<sup>3</sup> For example, knowledge of USPSTF colorectal cancer screening components ranged from 22% to 53% in first- through third-year medical residents.<sup>4</sup> One recent survey from the Centers for Disease Control and Prevention (CDC) found significant gaps in physicians' knowledge regarding the value of screening tests for ovarian and colorectal cancer.<sup>5</sup> Another survey found significant levels of nonadherence to USPSTF recommendations, including beginning cervical cancer screening too early, continuing it too long, and performing it annually rather than every three years as recommended.<sup>6</sup>
- In addition, recommendations for behavioral counseling are often not implemented. For example, counseling for tobacco cessation was documented in only 21% of visits in which tobacco use was documented.<sup>2</sup> This gap between guideline recommendations and actual practice has the potential to worsen as recommendations become more complex, vary by age group, and increasingly require risk assessment, as with recommendations for mammography, breast cancer chemoprevention, screening for the *BRCA* gene mutation, and screening for hepatitis B and C virus infections.

# What is your criteria to decide what screenings a practice will conduct routinely

#### **Reflection on your Practice's Community Demographic**

Urban Suburban Rural

#### **Reflection on the Social and Economic Conditions**

Condition	Considerations
Age	What is the average age? What does an aging population mean to your practice?
Sex/Sexual Identity	There are more than 2 categories.
Race/Language	Is health equity on your agenda - CLASS awareness? Do your patients trust you/your practice?
Income	Low, Median, High Income
Built Environment	Buildings, parks, transportation, healthy food access, walk-ability, bike-ability

Ē

### **Reflection on your Products & Services**

What products and services do we provide at – PCDC Community Health Center Diagnostic and Treatment Center

- Internal Medicine
- Pediatrics

Ę

- Prenatal and Postpartum Care
- OB/GYN/ Reproductive Health
- Cardiology
- Family Practice
- Behavioral Health

- Dietitian/Nutritionist
- Dentistry
- Podiatry
- Lab and Radiology
- Education
- Substance Use/Alcohol Use
- Smoking Cessation

### **Benefits of an Analysis on your Population**

#### HELPS SHAPE YOUR SERVICE LINE

#### HELPS TO VALIDATE THE INVESTMENT IN STAFF

#### HELPS TO INFORM YOUR SCREENING TOOLS AND PROTOCOLS

Ę

#### **Resources for the data...**

#### Electronic Health Records (internal)

#### Patient intake forms (internal)

#### Screening tools SDOH/SOGI (internal)

Retrospective coding and billing (internal) Community needs assessment (external)

Center of Excellence for Integrated Health Solutio

## **Implement and Roll out Screening Tools**

#### Decisions made leveraging information

- Evidence based National Preventive Service Task Force
- Internal and external data
- What would serve my population best?
- Tools selected
  - PHQ 2, PHQ 9, GAD, AUDIT, etc.
- Develop a plan, inform all stakeholders
  - Workflow created Policy and procedure completed

#### Fast forward one year... Conduct your due diligence work again...

Patient Intake forms (internal)

Screening tools SDOH/SOGI (internal)

**Retrospective coding and billing (internal)** 

**Community needs assessment (external)** 

# Screening needs to be linked to support/referrals... reality check list

- Screening for BH conditions behavior doesn't automatically mean you have access to support/referrals
- Screening doesn't mean increase billable service
- Screening and patient education doesn't equal adherence
- Finding referral support may require the PCP network with BH providers/develop referral compacts

#### Identifying and Operationalizing Sustainable Screening Processes

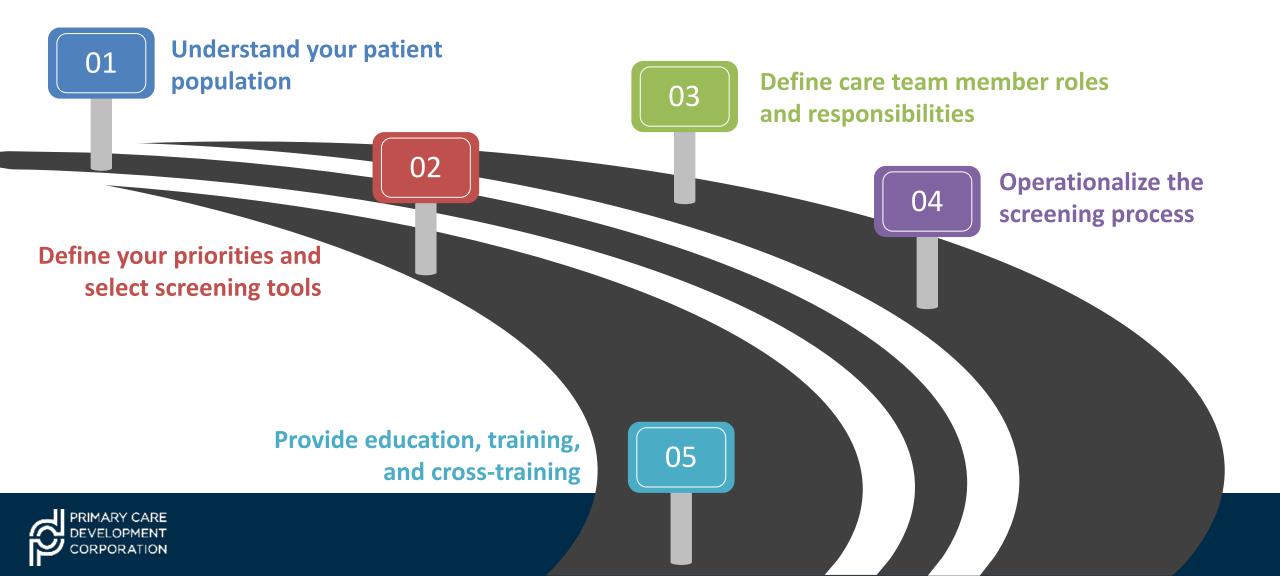

### **Preventive Screening Roadmap**

Ē

# Establishing 'Buy In' Among ALL Staff

- Communicate the 'why' before the 'must'
- Include discussion of population specific factors or outcomes
  - E.g., Breast Cancer screening among African American women
- Discuss plans for sharing of data once screenings are initiated

# **Defining the Care Team**

#### **Primary Care Core Team**

- Doctors, Nurse Practitioners, Physician Assistants, Midwives
- Patients/Caregivers
- Peer Advocates/Patient Advocates/Patient Navigators
- Nurses

Ē

- Front Desk
- Medical Assistant
- Practice Manager
- Care Managers/ Care Coordinators

#### **Extended Care Team**

- Administrative Managers/Directors
- Clinical Specialists
- Addiction Specialists and Counselors, Case Workers
- Phlebotomist
- Pharmacists
- Social workers, Psychiatrists, Psychologists
- Legal Aides
- Community Health Workers
- Housing Navigators & Community Providers
- Health Educators

#### **Real World Example Diverse Staffing Structure**

# **Technology is your assistant**

- Clinical Decision Support Systems (CDSS) alerts remind clinicians that patients are due for screenings
  - Can be adjusted according to a standard or individualized time frame
- Registries
  - Can be run manually to identify patients due for screening followed by outreach to individual patients
  - May also be more sophisticated population management programs integrated into the electronic health record

### Registries

1

Manual – reports run by individuals using identified criteria

4

Automated – reports built into system and automatically run at a selected frequency

Electronic – built into the electronic health record but must be manually run

Integrated – real-time pop management platform that can be viewed by all care team members any time

Center of Excellence for Integrated Health Solutions

### **Registries – One Size Does Not Fit All**

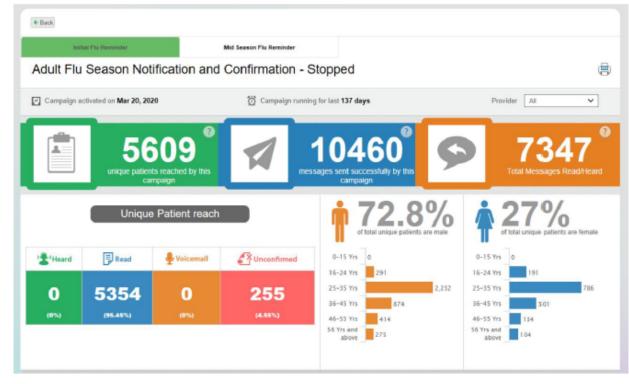

#### Used to identify patients due for screenings to allow for proactive outreach from the practice

# Write Policy and Procedures for the People

- Staff training to conduct any activity is typically informed by practice/org. policy
- A policy is written set of guidelines
  - outlines plan for addressing certain issues
  - communicates values, philosophy, and culture

No matter the industry, every organization needs policies and procedures to operate effectively

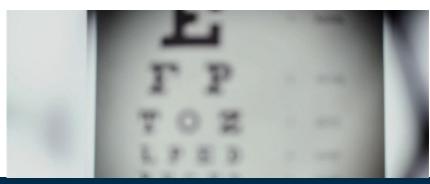

#### **Procedures tell me "How to conduct the policy"**

To understand why we need procedures we must look at what needs to be in control

#### What are areas of variability in your practice?

Examples:

- How staff 'rooms' a patient
- How are patients informed about same day appointments or screenings
- How the care team is organized to conduct SBIRT screening

nded by Substance Abuse and Mental Health Services Administration erated by the National Council for Behavioral Health

#### **Best Practices**

- Clearly identify which standardized tools will be used to complete the screenings
- Ensure the tools are integrated into the electronic health record
- Clarify 'who' will conduct the screening and frequency

Evidence-based, standardized tools selected for screening purposes

- 1. Tobacco Screening
- 2. Depression PHQ-2 and PHQ-9 for all patients 18 and older
- 3. Alcohol and Substance Abuse SBIRT pre-screen for Adults, CRAFFT for Adolescents
  - a. Alcohol Audit and Audit C for Adults, CRAFFT for Adolescents
  - b. Substance Use DAST-10 for Adults
- 4. Childhood Developmental Screening
  - a. PEDS administered during WCC for ages 0 to 7
  - b. PSC administered during WCC for ages 8 to 13
  - c. CRAFFT administered during WCC for ages 14 to 17
- 5. Social Determinants of Health Screening (SDOH)
  - a. PRAPARE tool used for all patients

# **Sample Documentation – Quiz #1**

Depression Screening

i. Depression Screening will be conducted using the PHQ-2 and PHQ-9 screening tools. All patients 18 years of age and older will receive PHQ-2 screening annually. PHQ-9 screenings will be conducted for patients who receive a positive PHQ-2 screening. Staff should complete the PHQ-2 screen when an alert for PHQ-9 is visible in a patient record.

- What is good about this policy documentation?
- What could be improved?

## **Sample Documentation – Quiz #2**

Further down in the policy.....

i. For any positive screen, the clinician will assess patient to determine if diagnostic criteria are met and identify if treatment or referral to treatment is needed.

- How could this action be improved?
- How would it look different in an integrated care environment?

### **Team Training – Invest In Your Team!**

- Commit to culture of continuous learning
- Continually add descriptions to job roles and responsibilities
- Develop structured communication methods
- Provide outside training and cross-training
- Provide ongoing training for all team members in new skills, information, etc.

### **Post-webinar Skills and Comfort Poll**

After attending this webinar, please rate your skills and comfort with selecting and utilizing screening tools and approaches to adopting screening protocols.

- 1. Very Low
- 2. Low
- 3. Moderate
- 4. High
- 5. Very High

#### An Integrative Approach to Addressing Diabetes Learning Series

With over 100 million Americans living with diabetes, more providers than ever before recognise chronic disease acreening and management as a best practice of integrated primary and behavioral health care.

In this free virtual learning series by Primary Care Development Corporation (PCDC) and the U.S. Department of Islath and Human Services Substance Abuse and Mental Health Services Administration (CAMHGA) Concer of Excellence for Integrated Health Solutions, national experts provide guidance through

seven multifaceted assolnts — each addressing a different aspect of team-based care to improve diabete acreening and management. Topics range from behavioral treatment to reimbursement to operational decision making.

Providers can round out their practice and earn a certificate in recognition of commitment after completing this seven-part virtual learning series. Watch recordings and download the presentations below:
